# Open Data Portal
## Demonstration

CITY OF VICTORIA
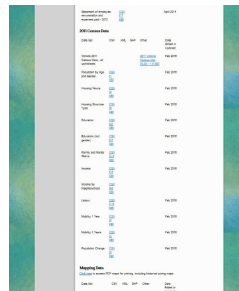

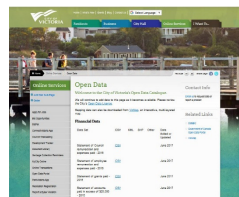

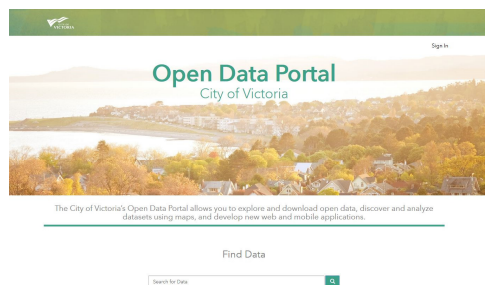

---

## Previous – Open Data Catalogue

- Launched the Open Data Catalogue in 2013 on the City's website

- Almost 300 datasets were included in various formats

- Catalogue provide data sets in list form only, not easily searchable, and no visualizations
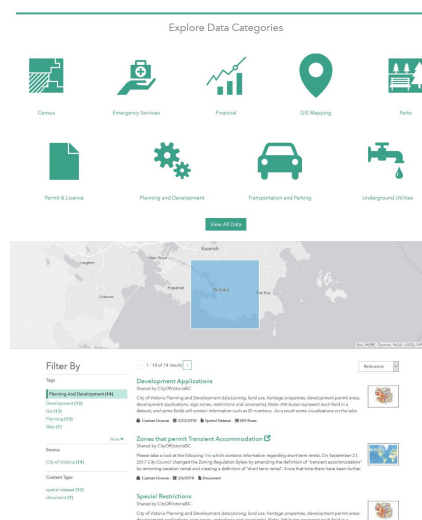

# New – Launched Open Data Portal

- First major enhancement since the original launch of the catalogue in 2013

- This new portal makes the City's data more accessible to all users

- Maintains all the raw data from the catalogue and adds new functionality, including better navigation, graphing and mapping.
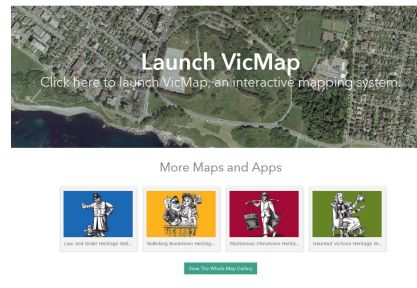

# New Portal - Functionality

- Better search function, including by category

- When viewing categories of data, allows the user to filter by keywords, and review the data before downloading
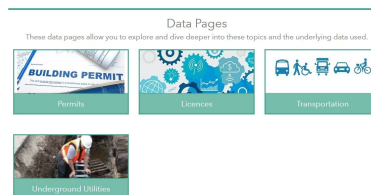

# New Portal - Functionality

- Allows for "added value" content to be included, such as links to VicMap and walking tour maps that pull from and use the same data sets included in the portal

---

# New Portal - Functionality

- Data pages allow for additional context to be added along with the raw data

# New Portal - Visualizations

Includes visualizations for permits and inspection data, allowing users to sort and view permits by year, neighbourhood, value and property type

# What's Next?

Future improvements may include more visualizations of additional categories of information, and more data sets from across the organization.
