Northern Junk Design Rationale

The landscape design associated with the updated Northern Junk building creates a functional and vibrant urban waterfront space that celebrates City of Victoria's shoreline. The public will benefit from the extended connection of the David Foster Way, proximities to Reeson Park and Johnson Street Bridge Public Realm.

Wharf Street Connection

The cast in place concrete sidewalk follows the requirements outlined in the Downtown Public Realm Plan and Streetscape Standards for the district of Inner Harbour. While there isn't room to include street trees between the existing buildings and the curb line, by not shifting the curb to achieve the necessary space we are able to protect the mature trees opposite the building. The hardscape paving in the passage between the buildings uses the same rhythm as the jointing in the sidewalk to create unity of the two spaces. The passageway also benefits from the glass tiles that create a light well into the spaces below. In-ground lighting along the edges provides safe lighting levels to prevent CTPED related issues. A gate located in line with the building faces and designed with historical reference can be used to secure the passageway after business hours.

Reeson Park Interface

The building design promotes an eyes-on-the park relationship of the CRU, the lobby and the residential units above Reeson Park. This is not only a benefit to the residents but provides a significant CPTED improvement as the sunken park is not in view from the street.

David Foster Way

The public extension of David Foster Way matches and aligns with the existing 4.5-meter width. The walkway is constructed from heavy timber members that evoke the industrial historical significance of the site. Emphasizing this relationship between the built and natural environment is a large precast "stone" seating feature. It provides a place to rest, wait for a table at the restaurant or simply enjoy the view.

The two outdoor patios are surfaced with stone payers that create significant visual distinction between private and public spaces and also carry the historical connotation. These patios will provide animation along the David Foster Way. The comfortable atmosphere of the outdoor dining patios is created by discrete glass enclosures and two planters defining the spaces and protecting from the ocean winds. It is further emphasized by catenary lighting that defines the space with open canopy and provides soft ambient light,

The lower level of the passageway between the historical buildings uses heavy timber paving to create visual unity between the passageway and David Foster Way. In-ground lighting along the edges provides safe lighting levels to prevent CTPED related issues. As at the top on Wharf Street, a gate In line with the buildings provides after business hour security.

Rooftop

The rooftop includes an extensive sedum grass and perennial green roof and patios for residents. The patios are paved with hydrapressed pavers to allow for ease of removal for replacement and access to the slab for maintenance. There are three large cast in place planters located on the roof, one of which will serve as urban agricultural plot for the residents. Three shade structures will be providing comfort for residents using the roof for gardening or for leisure. The plant palette includes small native trees and native adapted plants with a variety of bloom periods and textures to reduce the need for watering while delivering all season interest.

Sustainability

Locally sourced stone pavers, manufactured timber and paving slabs have been selected as the paving material for their durability. A high efficiency, fully automated drip irrigation system with rain sensor will ensure healthy plant growth while keeping water use to a minimum. The green roof improves air quality, provides significant areas of planted space which will contribute to the reduction of heat island effect, reduce the urban storm water runoff and increases the habitat area along the shoreline.
