March 25, 2022

Mayor and Council City of Victoria #1 Centennial Square Victoria, BC V8W1P6

Mayor and Members of Council:

RE: POINT HOPE GRAVING DOCK - DEVELOPMENT PERMIT APPLICATION 203 – 211 Harbour Road

Point Hope Maritime is an integral part of Victoria's Working Harbour and the City's industrial economy. In 2003, the Ralmax Group of Companies (Ralmax) acquired the bankrupt shipyard at the urging of the Council of the day to reinvigorate the industrial operation. Upon review, it was determined that the business had failed not because it was no longer relevant – it failed because the business had lost sight of where the industry was going.

Following an investment of more than \$20 million, Point Hope Maritime Ltd (Point Hope) reopened in 2006 featuring a new marine railway, 3 spurlines that increased the capacity at the shipyard by 300% and new environmental systems including the alteration of the slope of the shipyard away from the harbour and a site-wide water catchment and treatment system. Point Hope has been operating at capacity since 2015 and today, with 4 spurlines, has set company records for the most activity at the shipyard and the largest payrolls with more than 175 union employees on the site plus another 50 - 60 contractors and service providers. More than 650 businesses – the majority of them local, are suppliers and contractors to Point Hope.

In 2014, as part of a land exchange that would be a catalyst for economic development, the Provincial Government and the City of Victoria exchanged several key properties including the shipyard lands. The Province then divested these lands to Ralmax, the long-term lease holder, owners of Point Hope. Ownership of these lands provided Ralmax with the certainty necessary to commence plans to invest in ongoing modernization, new business development, and training to meet the growing demand for skilled labourers.

In 2015, City Council adopted an economic action plan, *Making Victoria: Unleashing Potential. Making Victoria* focused on supporting the City's key economic sectors, including the ocean and marine sector. One of the key objectives called for the modernization of marine facilities in the

City. The plan supported the inclusion of a Graving Dock in Victoria Harbour, and on February 15, 2018, following two years of community engagement undertaken by Point Hope, the City of Victoria gave their unanimous support for a Development Permit (valid for 2 years) to proceed with the construction of the graving dock pending Federal Government approvals Federal Government approvals were received in January 2020, and we subsequently requested and received an extension to the City's Development Permit.

In 2020, City Council adopted *Victoria 3.0 - Recovery Reinvention Resilience - 2020-2041*. This economic action plan is a long-term plan and vision for a sustainable, influential city that will build a strong innovation ecosystem and create a strong and resilient economy now and for the future. It is within the spirit of this plan that the Ralmax Group re-applies for the Development Permit in order to move forward with its planning for the graving dock. All necessary Federal approvals remain in place.

The Ralmax Group of Companies is a strong local example of the motivations that are foundational to the City's Victoria 3.0 economic plan.

<i>Victoria 3.0</i> Economic Action Plan is being made in order to:	Ralmax has long-been committed to investing in new technologies and industrial practices that consider the health of the communities where we work and live as well as the health of the environment.
 Respond to the threats and opportunities created by climate change Recover from COVID-19 and create resilience so our local businesses and economy can withstand emergencies 	 For more than 20 years, Ralmax has dedicated time and resources to community restoration initiatives on Victoria's upper harbour and river and ocean stewardship initiatives with total financial investment estimated at \$500,000.00 Meaningful reconciliation efforts with Indigenous Peoples long before UNDRIP.
 3. Stimulate and support innovation 4. Substantially leverage our existing skills and assets 5. Build on the economic stability offered by our large public sector employment base 	 2012 – Ralmax created Salish Sea Industrial Services (SSIS), a marine industrial company with majority ownership held by the Songhees and Esquimalt Nations. SSIS pioneered the removal of abandoned vessels from Victoria Harbour and the Salish Sea. This important initiative is now a funded priority for all levels of government. Invested \$20M in environmental and operational
6. Diversify our economy	management systems at Point Hope Maritime at the

	time of acquisition in 2003. Ralmax cleaned up the site	
7. Prepare our workforce for the	and changed the way business had been conducted for	
future	the past century installing a water catchment and	
	treatment system across the entire site to stop water	
8. Build on BC and Canada's strong	run-off into the harbour as but one example. Point	
international reputations for	Hope Maritime has achieved ISO environmental health	
innovation and access to the world's	and safety standards and exceeds requirements under	
best markets	these international standards and has more than	
	doubled its workforce to meet business demands.	
	• The Victoria Harbour Industrial sector, including Point	
	Hope Maritime, generate \$211 million to the local	
	economy (2021 Victoria and Esquimalt EIS) providing	
	employment and economic diversity.	
Point Hope Maritime partnered with Damen, a		
	leaders in ship building, repair and maintenance, and	
	BC Ferries on service agreements that has enabled	
	Point Hope Maritime to develop specialized expertise in	
	hybrid technology as BC Ferries works towards	
	electrifying their fleet in the coming decades.	

The Ralmax Group of Companies is strongly aligned with the City of Victoria's economic plan and appreciates the City's recognition that remaining competitive, relevant, and responsive to the market are essential business success factors.

The economic realities associated with the COVID-19 pandemic, created business risks for the Graving Dock that were too great to move forward with construction. With COVID restrictions lifted interest in bringing vessels to the Graving Dock, has returning to pre-pandemic levels.

As part of Point Hope's ongoing plan for growth and economic sustainability, we respectfully request your consideration of our application for the Development Permit to be reissued to modify our waterfront to construct a Graving Dock facility within our existing footprint and waterlot. As previously presented, the alteration of the foreshore is entirely compatible and in keeping with the new Johnson Street bridge construction and fendering. As the Graving Dock is constructed largely within the existing footprint of the shipyard, the new structure does not affect the navigable waterway.

The Graving Dock is a strategic economic asset for the City of Victoria and the Capital Region, is

consistent with the shipyard's operation function, and aligns with the City's land-use priorities as set out in the *Official Community Plan*.

Our corporate vision aligns with Victoria 3.0.

To support sustainable, viable and responsible industry that leverages and optimizes the inherent value of the Victoria Harbour; industry that:

- Ensures a strong, resilient, and diversified economy for future generations.
- Responds responsibly to a changing climate
- Strengths the workforce participation
- Profitably provides family-sustaining jobs for local residents
- Leverages international networks to compete in the world's markets
- Builds community pride in local expertise

The new facility will be able to service vessels up to 170 metres in length and 50,000 tonnes. The addition of the Graving Dock responds to market opportunities and once again, greatly increases the number and types of vessels we are able to service at the shipyard.

Harbour Road Industrial Waterfront Design Guidelines (October 2008)

The new Graving Dock facilities (the Graving Dock, docks and yard space) will be constructed in the areas identified as the South and Central Development Areas, in the City's *Harbour Road Industrial Waterfront Design Guidelines* (the *Guidelines*).

While the *Guidelines* contemplate an increase in the number of buildings on the waterfront, no additional buildings are being constructed as part of the current plan. Our plan consolidates and redistributes our operations over the 4-acre site enhancing water access and moorage. All of the

proposed work will take place largely within the existing footprint of the shipyard.

The Graving Dock

The new development includes replacing the existing inefficient pile dock facilities (estimated to be 50 years old) and redefining a new foreshore with concrete caissons. The Graving Dock basin will be behind the newly defined foreshore and will be constructed of concrete with steel doors (see the submission drawings).

The reconfigured docks will provide 180 metres moorage alongside, to accept vessels before docking and after docking for completion of repairs. This will not only allow for increased work capacity, but the new docks also provide safer, more efficient, and more environmentally sound moorage than the existing docks.

The Waterfront

The *Guidelines* contemplate the retention of the character of the traditional pile docks as an aesthetic character; however, this is not practical or environmentally sound for a modern marine industrial operation. As noted above, the new dock will provide safer, more efficient, and more environmentally sound moorage than the existing docks.

It is important to note that the height of the new dock will be the same height as the existing docks, dictated by the level of the centre height of the turntable. This means that between low and high tide there will be approximately between 2.7 m and 4.6 m of dock that will be visible.

While the configuration of the foreshore will be more linear than the current docks, the view of the new dock, from across the harbour and from the water, will be constantly changing and visually interesting as vessels come and go from the facility (see the submission renderings which approximate the view at mid-tide). Over time the new docks will provide habitat for intertidal species and sea life which will add to the visual interest for anyone viewing the area from the water.

Harbour Road

UNITED

ENGINEERING

ESQUIMALT

DRYDOCK COMPANY

All of the work to build the Graving Dock facilities will take place along the water's edge and no change is contemplated on the Harbour Road frontage. The visual interest along Harbour Road will continue to be the changing nature of the work in the shipyard.

The street edge and viewing area, previously constructed by Point Hope, will continue to be maintained and provide areas for those who are interested in viewing the work in the shipyard. We will complete the same treatment of decorative fencing, and landscaping along the

remainder of the Harbour frontage.

No changes are contemplated to the main entrances and exits. Deliveries of major components or materials will continue to be managed using traffic controllers. Given the nature and timing of deliveries this has proven to be the safest and most effective means of traffic management to and from the site; especially given the cycling traffic on Harbour Road.

Buildings

As noted above, no new buildings are contemplated as part of the Graving Dock construction. The existing office building is being retained and improved including new exterior cladding which was completed in 2020. This building will be used as the Shipyard office and for employee facilities such as washrooms and a lunchroom.

The existing United Engineering Building will be either partially or fully demolished. If a portion of it is retained, it will be fully upgraded. This would be part of a future DP application if necessary.

Yard Areas

The yard areas surrounding the Graving Dock will be hard surfaced and paved with asphalt and concrete. No ship repair activity will take place on apron area directly outside of the Graving Dock. Service water and storm water in the graving dock will be collected through stormceptors and directed to a water treatment plant for treatment to a standard acceptable for storm outfall discharge. A separate storm water and management procedure will be incorporated into the Construction Environmental Management Plan.

Habitat Restoration and Protection

DRYDOCK COMPANY

Ralmax, the owner, of Point Hope Maritime has a strong relationship and history of working with the Veins of Life Society and other local organizations dedicating time and resources to the restoration and clean-up of Victoria Harbour. This commitment to the environmental health of the harbour was established long before the acquisition of Point Hope Maritime. Upon assuming ownership in 2003, Ralmax invested \$20m in modernizing the shipyard including the introduction of a water catchment and treatment operation which launched the journey of changing the culture of the workforce and the environmental and safety practices.

Ralmax received a Fisheries Act Authorization (FAA) for the construction of a graving dock at Point Hope from DFO. The FAA authorizes the removal of the existing marine structure and the construction and operation of a graving dock at the Site. A condition of the FAA was that Ralmax provide habitat offsetting through the construction of 5,750m² of subtidal rock reef complexes. The objective of the habitat offsetting was to maintain or enhance marine fish habitat through habitat creation. Ralmax identified the rock reef installation in West Bay as the first step in the Graving Dock project and work was completed in West Bay by Salish Sea Industrial Services from August 17 to September 2020. In August 2021 a dive survey was competed to assess the species richness, diversity and density for fish, barnacles, seaweeds and diatom film. The reefs have been deemed to be colonizing successfully and are more diverse and richer in species than the site was prior to reef installation. As per the FAA monitoring will continue to evaluate the habitat effectiveness with the next scheduled monitoring event to occur in or around August 2022.

Responsible Industrial Operation

Point Hope Maritime is a responsible industrial operation and has achieved certification under:

- ISO 14001 Certified Environmental Management System
- OHSAS18001 Health and Safety Certification
- ISO9001 (Quality Management Certification)
- Green Marine Environmental Certification (voluntary participation)

For more information on the Point Hope Graving Dock Environmental and Regulatory Management Plan (please refer to Appendix A).

Good Neighbour Policy

POINT HOPE

MARITIME

NIXON BROS.

RUCK REPAIR

UNITED

ENGINEERING

ESQUIMALT

DRYDOCK COMPANY

Point Hope Shipyard recognizes the challenges and responsibilities of operating an industrial operation in an urban setting and has developed a culture of pro-active engagement and collaboration with neighbours. We are committed to working within the City's established guidelines and bylaws for industrial operations.

Point Hope has developed positive and respectful relationships with our residential neighbours and the community at large. In the recent past this included collaboration on the new Master Plan for Dockside Green, resulting in the community-inspired relocation of the Dockside Green Plaza to Harbour Road to optimize views of the shipyard. Importantly, we have established strong channels of communication between the residents and businesses at Dockside and the General Manager of the Shipyard. We are responsive to concerns when they are raised. In fact, very few

complaints have been received over the past two years.

We are community-minded and support many local organizations and initiatives. In 2013 Point Hope held its first annual community open house at the shipyard and approximately 200 people attended for a tour. The attendance numbers grew substantially to almost 1000 visitors in 2014. In 2015, Point Hope partnered with Dockside Green and the Resilient Neighbourhoods initiative to present VicWest Street Fest – a celebration of the Victoria West community built around the open house and tours at Point Hope. At the 2016 VicWest Street Fest, Point Hope shared their vision of introducing a Graving Dock to over 2000 people from across the region, and in 2017, Point Hope welcomed over 3000 citizens for tours and the opportunity to view the Graving Dock renderings with Point Hope's new General Manager. Open houses were also conducted in 2018 and 2019. (Please refer to Appendix B for an overview of engagement).

Victoria Harbour is the traditional territory of the Songhees and Esquimalt Nations and a vital community and regional asset. Since 1990, Ralmax has been involved in and played a pivotal role in the restoration and clean-up of Victoria Harbour and continues to champion this important objective. Ralmax has also been an active and engaged advocate for First Nations' interests in the region and on the harbour. In 2012, Ralmax acquired a water-born construction business and entered into an ownership partnership agreement with Songhees and Esquimalt Nations. With majority ownership held by the Nations, this business serves as an economic generator and a successful training ground for members of their communities helping develop interest, capacity and opportunities for apprenticeships and journeypersons training across all Ralmax companies. Salish Sea Industrial Services pioneered the recovery of abandoned vessels on Victoria Harbour and the Salish Sea. This early work resulted in bringing together all levels of government - including Indigenous governments - in funded programs to remove and responsibly dispose of these vessels that represent a harmful environmental issue.

Ralmax is also a founding member of South Island Prosperity Project supporting the economic development goals of the Capital Region and welcomes opportunities to be involved with emergent work being undertaken through the launch of COAST sponsor of Camosun College's trades program. Ralmax is a generous contributor to local organizations and responsive to the needs in the community. (Please refer to Appendix C for an overview of partnerships)

Conclusion

The important and enduring role that the Ralmax Group of Companies plays in the local and regional economy was recognized by the Greater Victoria Chamber of Commerce in 2020 when Ralmax was the proud recipient of the Business of the Year award for companies with over 40 employees. In 2022, Ralmax's CEO and President, Ian Maxwell will be honoured for his leadership in developing the region's economic growth and prosperity at the inaugural celebration of Greater Victoria Chamber's Business Hall of Fame.

As long as boats float, there is a constant demand for modern ship repair and maintenance expertise. Victoria's Upper Harbour is one of a very few safe protected harbours on the west coast of North America where a shipyard can thrive - today and for future generations.

We appreciate your time to revisit this application. As we emerge from the COVID pandemic, we look forward to continuing to work with the City of Victoria and its citizens to make this important project happen.

Point Hope Graving Dock Project – Environmental & Regulatory Management Program - July 2017

Environmental Commitment

Ralmax is committed to executing work for the Point Hope Graving Dock (PHGD) in a manner that:

- controls, mitigates, and minimizes potential environmental effects;
- fully complies with applicable laws and regulations; and
- aligns with environmental performance expectations of the community and First Nations.

Execution Plan

Ralmax has established a Permit Team that is dedicated to ensuring Project activities are conducted in accordance with the environmental commitments. The Permit Team positions are as follows:

• Ralmax Environmental Coordinator

POINT HOPE

MARITIME

NIXON BROS.

RUCK REPAIR

- SNC-Lavalin Environment/ Permit Manager
- SNC-Lavalin Environmental Effects Coordinator

UNITED

ENGINEERING

ESQUIMALT

DRYDOCK COMPANY

• Specialized SNC-Lavalin personnel as required (e.g., Senior Aquatic Biologists and Contaminated Site Specialists)

In order to proceed with construction, a number of permits, authorizations and approvals are required. The Permit Team has identified the permits, authorizations and approvals which are applicable to the PHGD Scope of Work; a complete listing has been provided below.

The PHGD project is still in the design phase; therefore, specific measures to mitigate potential impacts to the environment are still in the development phase. That being said, the Permit Team will continue to work with provincial and federal regulatory bodies to identify any additional environmental requirements, address environmental issues, and ensure exchange of accurate and timely information.

Prior to the commencement of construction activities, a wide variety of project and site-specific environmental management plans and procedures will be developed. An Environmental Protection Plan (EPP) will provide a mechanism to control, minimize and minimize potential negative effects on the environment during the construction phase. In order to ensure that commitments within the EPP will be implemented, site specific plans and procedures will be developed; these will include:

- Environmental Management Plan
- Contaminated Soil Management Plan
- Discharge Management Plan
- Waste Management Plan
- Spill Prevention & Response Plan
- Regulatory Compliance Plan

Permits, Authorizations and Approvals:

1. Facilities Alteration Permit

The Facilities Alteration Permit (FAP) will allow Ralmax modify the current water lot lease agreement in order to meet the needs of the PHGD. The FAP also provides a mechanism for various Transport Canada groups to review Project components and make informed decisions on how Project activities may impact their mandates.

2. Environmental Effects Determination

The PHGD Project will require coordination and review by federal authorities to determine potential environmental effects. Federal authorities include Transport Canada and the Department of Fisheries and Oceans. The regulatory process for regulatory authority review of Project environmental effects consists of the following steps:

- a. Submission of a Project Description (complete)
- b. Submission of the Environmental Effects Evaluation Document which includes:
 - technical review by federal authorities.

UNITED

ENGINEERING

ESQUIMALT

c. Environmental Effects Determination

POINT HOPE

MARITIME

NIXON BROS.

RUCK REPAIR

RALMAX GROUP OF COMPANIES

CHEW

CONTRACTING

RALMAX

A determination will be made by each Federal Authority in accordance with the requirements of Section 67 of CEAA 2012 and related guidance provided by the Canadian Environmental Assessment Agency. If the project is determined unlikely to cause significant adverse effects, the Authorities may allow the project to proceed, taking into account mitigation measures determined through the environmental evaluation process.

If a Project is likely to cause significant adverse effects the authorities must not carry out the project or refer the project to the Governor in Council to determine if the significant effects are justifiable if the project were to proceed.

3. Fisheries Act Authorization

As per Section 35(1) of the Fisheries Act, "No person shall carry on any work, undertaking, or activity that results in serious harm to fish that are part of a commercial, recreational or Aboriginal fishery, or to fish that support such a fishery." In response to this requirement, a Serious Harm Assessment (SHA) has been drafted and will be submitted to Fisheries and Oceans to determine if the project will cause serious harm to commercial, recreational or Aboriginal (CRA) fisheries. The SHA will also highlight measures that will be implemented in order to mitigate serious harm to CRA fisheries. The DFO will review and determine whether a Fisheries Act Authorization is required. The DFO will also determine the scope of additional requirements (i.e., habitat offset, surveys etc.).

4. Navigable Protection Program (NPP) Notice

Under Section 5(2) of the Navigation Protection Act, a work that substantially interferes with navigation will require a NPP approval from Transport Canada. The Project team will consult with Transport Canada to obtain necessary NPP approval.

5. Environment Canada Disposal at Sea Permit

Pursuant to the Canadian Environmental Protection Act, 1999 (CEPA 1999), A Disposal at Sea Permit is required to dispose of materials at sea or load materials for that purpose. It sets out conditions controlling the disposal, including the type of material, the quantity, the location of the loading site and disposal site, equipment use and requirements and restrictions such as the timing of disposal operations. Ralmax is exploring disposal options for non-contaminated dredged material. It is not yet decided if this will be the chosen disposal method, but in the event that Ralmax would like to pursue this option, the appropriate steps, including consultation with Environment Canada, will be followed.

6. Environmental Assessments

Under the Canadian Environmental Assessment Act, 2012 (CEAA 2012), an environmental assessment focuses on potential adverse environmental effects that are within federal jurisdiction. The Canadian Environmental Assessment Agency (the Agency) is responsible for administering the federal environmental assessment process (excluding nuclear, pipeline, and transmission line projects) and regulates works that are designated activities under the CEAA 2012.

A Project Summary was submitted to the Agency on February 16, 2016, for review. It was determined by the Agency that the proposed Project is not considered a 'designated project' and does not trigger further environmental assessment under the CEAA 2012.

The Permit Team consulted with the Environmental Assessment Office on July 11, 2017. It was determined by the EAO that the proposed Point Hope Graving Dock does not fall within the thresholds that would make a project reviewable under the Reviewable Projects Regulation.

Laws & Regulations:

POINT HOPE

MARITIME

NIXON BROS.

RUCK REPAIR

UNITED

ENGINEERING

ESQUIMALT

DRYDOCK COMPANY

Ralmax recognizes that there are environmental & regulatory requirements that do not necessarily fall under a permit or authorization (e.g., waste management). The Permit Team will work collaboratively to identify these requirements, and ensure these requirements are met through the development and implementation of site-specific plans and procedures.
