## **GE Free Victoria**

WHEREAS genetically engineered (GE) foods have not been adequately tested by any federal agency for longterm impacts on human and environmental health, with public agencies relying on data presented by corporations that hold GE patents;

AND WHEREAS the precautionary principle is an approach to risk management that has been developed in circumstances of scientific uncertainty, reflecting the need to take prudent action in the face of potentially serious risk;

THEREFORE WE, THE UNDERSIGNED, call on Victoria City Council to demonstrate leadership by placing itself on record opposing the cultivation of genetically engineered crops, plants and trees within the City of Victoria, and calling for action by the Federal and Provincial governments to introduce mandatory labelling of products containing genetically engineered organisms and place restrictions on further genetically engineered products being brought to market in the absence of scientific testing of long-term impacts on human and environmental health.

1. GMO technology has never be proven safe, as set out in painstaking detail in Stephen Druker's book "Altered Genes, Twisted Truth" 2. There is no scientific consensus on the safety of GMOs. 3. GMOS are married to \*known\* and "likely" carcinogenic pesticides and herbicides and increase the use of these poisons which pollute the air water soil and ourselves. Three horrific biocides include Glyphosate (used in almost all commercially grown GMO crops), Dicamba and 2-4 D (active ingredient of agent orange) 4. GMOs reduce biodiversity 5. GMOs cannot be grown alongside non-GMOs. Farmers whose fields are contaminated with neighbors' GMO pollen are frequently sued by patent holders of GMOs. 6. A small handful of huge international companies develop and own the patents on over 90% of all GMOs grown. This type of mono crop monopoly is not healthy for the planet. 7. In the long run, long term studies by the Rodale institute show that GMOs do not increase yields. 8. GMOs are not providing a solution to world hunger. They are not feeding the world but rather poisoning the planet. 9. Due to intense lobbying of the Biotech companies and "big food" in N America, consumers do not even have the \*right to know\* if the food we are eating has GMOs. Conservative estimates show that over 80 percent of food in supermarkets contains GMOs. Unlabelled! Hence the N American public is unwittingly serving as uninformed testers of this unproven technology. The very same companies that oppose the right to know in Canada and the USA label their products in 64 other countries. Canada and USA are the world's only 2 developed nations that do not ban or require labelling of GMOs. For more information look up GMO Myths and truths, see "GMO OMG" by Jeremy Seifert and read "Altered Genes, Twisted Truth" by Steven Druker, public interest attorney. We do not want or need GMOs to contaminate our beautiful Victoria!

	77.			ВС	I am a local farmer who grows food seeds. As well as the concerns around GI we should also be considering where our seeds come from. Small seed comp like Metchosin farm, Full Circle Seeds and Saltspring Seeds grow many locall adapted food crop varieties. The majority of food seeds grown on Vancouver however, come from far away, with the world's major seed growing areas no China, Eastern Europe, mid-western USA, and South America.	oanies y- Island,
